
BULLETIN 2013-001-AD/BU

November 8, 2013

City of Vancouver - Energy Webpage Energy Requirements for Large Buildings (NC & EB)

The intent of this Bulletin is to announce a new webpage meant to centralize the information pertaining to energy requirements for large buildings, typically Part 3 and Part 9 (non-residential), including dates for the phased implementation of the 2014 Vancouver Building By-Law.

For New Construction projects, the new energy webpage provides information on referenced energy standards (ASHRAE 90.1, NECB 2011), city-specific changes/additions to these standards, as well as links to the associated Forms and Checklists required for building permit application.

For Existing Buildings, the new webpage also provides information on the new energy trigger requirements for building permit applications.

Detailed information can be found on the new energy webpage;

<http://vancouver.ca/home-property-development/large-building-energy-requirements-forms-checklists.aspx>

The new energy webpage also includes tutorials outlining the process, documents, and procedures necessary to complete the energy components of the building permit application.
