February 24, 2015

Automatic Receptacle Control (ASHRAE 90.1-2010)

Since January 21, 2014, Vancouver's Building By-law has referenced ASHRAE Standard 90.1-2010, within which ASHRAE includes a new provision requiring 50% of new receptacles within offices and computer classrooms to have an automatic control system. After a year of implementing this provision, and in the interest of improving customer service, the City of Vancouver has decided to relax this provision.

Effective immediately, all projects applying for a building permit and subject to ASHRAE 90.1-2010 are exempted from the energy standard's provision, 8.4.2 Automatic Receptacle Control.
